Grant Number: BF-00E00374-0

ACRES Property ID: 140541

Program Manager Name: Mr. Ed VanderVries

(Point of Contact)

Contact Phone Number: (269) 657-8234

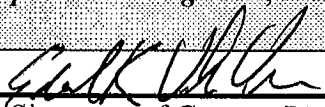

Name / Address of Property Assessed: Bangor Htg. & Cool/720 W. Monroe St., Bangor, Mi

Checklist

Please indicate that each of the following All Appropriate Inquiries documentation requirements were met for the Phase I assessment conducted at the above listed property:

- ☒ An **opinion** as to whether the inquiry has identified conditions indicative of releases or threatened releases of hazardous substances, and as applicable, pollutants and contaminants, petroleum or petroleum products, or controlled substances, on, at, in, or to the subject property.
- ☒ An identification of "**significant**" **data gaps** (as defined in §312.10 of AAI final rule and §12.7 of ASTM E1527-05), if any, in the information collected for the inquiry, as well as comments regarding the significance of these data gaps. Significant data gaps including missing and unattainable information that affects the ability of the environmental professional to identify conditions indicative of releases or threatened releases of hazardous substances, and as applicable, pollutants and contaminants, petroleum or petroleum products, or controlled substances, on, at, in, or to the subject property.
- ☒ **Qualifications and signature** of the environmental professional(s). The environmental professional must place the following statements in the document and sign the document:
 - ☒ "[I, We] declare that, to the best of [my, our] professional knowledge and belief, [I, we] meet the definition of Environmental Professional as defined in §312.10 of this part."
 - ☒ "[I, We] have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. [I, We] have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312."

Note: Please use either "I" or "We."
- ☐ In compliance with §312.31(b) of the AAI final rule and §12.6.1 of ASTM E1527-05, the environmental professional must include in the final report an **opinion regarding additional appropriate investigation**, if the environmental professional has such an opinion.

**PHASE I AND PHASE II ENVIRONMENTAL SITE ASSESSMENT
OF
COMMERCIAL PROPERTY
720 W. MONROE ST.
BANGOR, MICHIGAN**

EXECUTIVE SUMMARY

Envirologic Technologies, Inc. (Envirologic) performed a Phase I Environmental Site Assessment (ESA) of commercial property located at 720 W. Monroe St., Bangor, Michigan (subject property). The Phase I ESA has been performed in accordance with the American Society for Testing and Materials (ASTM) Standard Practice for Phase I ESAs (Standard E1527-05) and in conformance with the federal rule for All Appropriate Inquiry (AAI). Non-CERCLA issues that are not typically part of the ASTM standard scope of investigation (i.e., lead-based paint, radon, mold, vapor intrusion, wetlands, universal wastes) were not addressed as part of this Phase I ESA. The Phase I ESA was conducted in support of the proposed acquisition and redevelopment of the subject property by the Donald Cleveland, LLC. This report was prepared for the exclusive use of Donald Cleveland, LLC which may rely on the report contents.

The subject property is a rectangular-shaped parcel occupying 0.3 acres of land. The subject property is developed with a 1,170-square-foot retail building and a 2,560-square-foot pole barn. The subject property was first developed for commercial purposes in approximately 1950 and has been used for multiple retail/commercial operations since that time, including: convenience/grocery store, fuel retail, used clothing retail, and HVAC service. Two gasoline USTs and one kerosene UST historically present on site have been removed from the subject property.

We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E 1527-05 of 720 W. Monroe St. Bangor, Michigan, the property. Any exceptions to, or deletions from, this practice are described in the *Limitations* section of this report. This assessment has revealed no evidence of Recognized Environmental Conditions in connection with the property, except:

- The subject property meets the definition of a “facility” as defined by Part 201 of NREPA.

Petroleum impact to soil in excess of Residential cleanup criteria has been identified on the subject property in association with the former presence of a gasoline and kerosene underground storage tank system.

Envirologic will prepare a Baseline Environmental Assessment (BEA) and Section 7a Compliance Analysis on behalf of Donald Cleveland, LLC in order to obtain an exemption to remedial liability and demonstrate compliance with “due care” obligations.

Offsite Concerns

The potential for offsite activities to adversely impact the subject property has been evaluated. Multiple sites of known environmental impact are located in the vicinity of the subject property within the City of Bangor. No indications of impact from an offsite source were identified through the completion of Phase II ESA activities on the subject property. Based upon the completed assessment activities, the potential for impact from an offsite source is believed to be low.

**PHASE I AND PHASE II ENVIRONMENTAL SITE ASSESSMENT
OF
COMMERCIAL PROPERTY
720 W. MONROE ST.
BANGOR, MICHIGAN**

INTRODUCTION

Envirologic Technologies, Inc. (Envirologic) has conducted a Phase I Environmental Site Assessment of commercial property located at 720 W. Monroe St., Bangor, Michigan (subject property). The Phase I ESA has been performed in accordance with the ASTM Standard Practice for Phase I ESAs (Standard E1527-05) and in conformance with the federal rule for All Appropriate Inquiry. Non-CERCLA issues that are not typically part of the ASTM standard scope of investigation (i.e., lead-based paint, radon, mold, vapor intrusion, wetlands, universal wastes) were not addressed as part of this Phase I ESA. This Phase I ESA was conducted to identify conditions indicative of releases or threatened releases of hazardous substances or petroleum products (Recognized Environmental Conditions) and potential environmental liabilities associated with the property.

The Phase I ESA was comprised in significant part of a records review and a visual site inspection. The information gathered during the Phase I ESA was limited to that which could be reasonably ascertained from administrative sources and to visual observations made during the site inspection. Therefore, the ESA interpretations made herein are in the context of the data limitations. While Phase I ESA data is informative in nature, it is necessarily limited.

Purpose

The purpose of this assessment was to meet the requirements of All Appropriate Inquiry in support of acquisition and redevelopment of the property. Envirologic Technologies, Inc. recognizes Donald Cleveland, LLC's (the user's) reliance upon the contents of the Phase I ESA as part of the process of evaluating the environmental risks associated with the subject property.

Site Location

The subject property is located at 720 W. Monroe St., Bangor, Michigan (subject property). Specifically, the site is located within the northwest quarter of the southeast quarter of Section 12 of Township 2 South, Range 16 West, Bangor Township, Van Buren County, Michigan (refer to

Figure 1 in Appendix A). The subject property consists of one parcel with a tax identification number of 80-54-700-215-50. The legal description, obtained from the Van Buren County Equalization Department, is as follows:

978-A 2-16 857-537 869-355 869-354 1143-313 1220-453 1462-735,736 W 95' OF LOTS 215 & 216. A.H. MORRISON'S MAP OF THE CITY OF SOUTH BANGOR

Site Description

The subject property is a rectangular-shaped parcel occupying 0.3 acres of land. The subject property is developed with a 1,170-square-foot retail building and a 2,560-square-foot pole barn. Asphalt cover is in place along with southern property boundary. The remainder of the subject property consists of landscaped lawn space and sand/gravel ground cover. A more complete description of the project site is provided in the *Site Observations* section of this report. Color photographs of the property are included as Appendix B.

Physical Setting

According to the United States Geological Survey, the subject property is at an elevation of 656 feet above mean sea level and level. The subject property consists of relatively flat land with a very slight slope to the south-southwest. The nearest major surface water body is Maple Creek, located approximately 2,000 feet west of the subject property.

The following soils were generally characterized on the subject property by Envirologic during completion of Phase II ESA boring installation activities: asphalt and grass ground cover is underlain by a well sorted dark brown silty sand present to a depth of approximately three feet below grade level (bgl); the silty sand is underlain by a firm brown clay with medium to low plasticity which persisted to a depth of approximately eight feet bgl; the silty sand is underlain by a firm gray clay with medium to high plasticity which persisted to a depth of approximately 18 feet bgl; the gray clay is underlain by a well sorted tan sand. Groundwater was encountered approximately 18 feet bgl. Based upon a review of topographic features and hydrogeologic data generated at offsite properties in the region, groundwater is anticipated to flow in a north-northwesterly direction on the subject property.

ASSESSMENT OF PROJECT SITE

Methodology

The Phase I ESA has been performed in accordance with the ASTM Standard Practice for Phase I ESAs (Standard E1527-05). Additional non-CERCLA issues that are not typically part of ASTM standard scope of investigation (i.e., radon, wetlands, mold, vapor intrusion, lead-based paint, universal wastes) were not addressed as part of this Phase I ESA.

Data Sources

The following sources of information were utilized to assist in the environmental assessment of the subject property:

- Bangor & McDonald, Michigan USGS 7.5 Minute Topographic Quadrangles
- USDA Soil Conservation Service Soil Survey of Van Buren County, Michigan, 1978
- MDEQ Website for Environmental Liens
- User's/Seller's Questionnaire
- Environmental Radius Report for the subject property, generated December 8, 2011 by Environmental Data Resources, Inc. (EDR)
- Aerial photographs dated 1938, 1950, 1955, 1960, 1967 (scale: 1"=500') and 1974, 1992 and 1994, 1999, 2005, and 2006 (scale: approx. 1"=600') obtained from EDR
- Sanborn Fire Insurance Maps dated 1931 and 1944 obtained from EDR
- Van Buren County Plat Maps (various years) available through the City of Bangor and City of South Haven Libraries
- Review of publicly available information obtained from the following City of Bangor and Van Buren County offices:
 - Records/Building Department
 - Assessing/Zoning
 - Health Department
 - Public Works

Site-specific information obtained from personal and telephone interviews with the following people:

- Mr. Kirk McMorran – 5/3 Bank Trustee; Mortgage Holder
- Ms. Dianna Kay McGrew – City of Bangor Assessor

- Mr. Steve Lowder – City of Bangor Department of Public Works
- Mr. Derek Babcock – City of Bangor Fire Chief

Site Inspection

Mr. Erik Peterson of Envirologic conducted a site inspection of the property on December 12, 2011. All areas of the property were accessible. Weather conditions consisted of clear skies with temperatures in the mid-30s °F.

Data Gaps and Data Failures

A data gap is the inability to obtain information within the scope of the Phase I ESA. The following data gap was encountered for the Phase I ESA:

- Provided Sanborn maps did not include coverage of the subject property.

A data failure is the absence of information typically used to complete a Phase I ESA. The following data failure was encountered for the Phase I ESA:

- Key personnel familiar with historic site operations were not identified.

Due to the availability of other data sources (e.g., aerial photographs, personal interviews) the data gap and data failure have not significantly impacted the ability of Envirologic to identify Recognized Environmental Conditions.

User's Responsibilities

Ms. Coleen Daggett was interviewed on behalf of the user and a user questionnaire was completed based upon the interview (Appendix G). The user was not aware of any environmental or activity use limitations recorded against or relating to the property.

The user did not have actual knowledge of environmental liens or activity use limitations encumbering or in connection with the property.

The user provided a Risk Scan completed in connection with the subject property which identified the former presence of underground storage tanks (USTs) on the property as a concern that

warranted additional assessment. As detailed in this report, petroleum impact at “facility” concentrations identified on the subject property has been attributed to the former presence of gasoline and kerosene USTs.

Purchase Price

A purchase price significantly less than the market value of the property may indicate contamination on the property. Donald Cleveland, LLC, through Ms. Coleen Daggett, indicated to Envirologic that the proposed purchase price represented fair market value. Therefore, the proposed purchase price does not indicate the potential for environmental impact on the subject property. As indicated, Phase II ESA results demonstrate that the subject property meets the definition of a “facility” as defined by Part 201 of NRPEA based upon the presence of petroleum impact to soil in excess of Residential cleanup criteria.

Environmental Liens and Controls

The MDEQ RRD Cost Recovery Unit website was queried regarding potential environmental liens on the subject property. According to the MDEQ website, no environmental liens were listed for the project site. The User was not aware of any institutional or engineering controls placed on the property. No such controls were identified on the tax card obtained from the City of Bangor Assessor.

Based upon the “facility” status of the subject property, appropriate “due care” obligations exist. Documentation of compliance with “due care” obligations will be maintained through the completion of a Section 7a Compliance Analysis on behalf of Donald Cleveland, LLC.

Zoning

The subject property is zoned “B-1”, Central Business District according to the City of Bangor.

Site Ownership and Use History

The site ownership and use history was developed through a review of multiple data sources (i.e., aerial photographs, public documentation). A User questionnaire was completed via telephone interview to further identify the site use history of the subject property (Appendix G). Historic plat maps for Van Buren County do not provide ownership or use history information; the subject property is simply depicted as small tract land within the City of Bangor. The 1931 Sanborn does not provide coverage of Bangor west of Alexander St. thus no ownership/use history information

is provided. The earliest site use history information is a 1938 aerial photograph which depicts the subject property and adjacent land to the north as vacant and cleared of all vegetation. No indications of soil grading activities are evident.

City of Bangor Assessor information indicates that the 1,170-square-foot retail building was constructed in 1952. However, the 1950 aerial depicts this retail building on the subject property at that time. The remainder of the subject property is depicted as vacant land in the 1950 aerial. Increased commercial development east of the subject property is evident in the 1950 aerial relative to the 1938 photograph. Mr. Lowder of the City of Bangor reports that the subject property was historically developed as Mulac's Little Super – a general store. A historic assessor card identifies Alfred and E. B. Mulac as former owners of the subject property. The 1955 aerial photograph appears similar to the 1950 image. The 1967 and 1974 aerial photographs depict the subject property similarly to earlier images. Increased residential development north and south of the subject property and continued commercial development east of the subject property is evident during this period. Additional assessor card documentation appears to indicate that the subject property was occupied by August Rigozzi – Barber Shop in 1983.

Available MDEQ information indicates that three USTs containing gasoline and kerosene were installed on the subject property in April of 1979. The 1986 assessor card and the 1987 Johnson city directory for Bangor identifies Bangor Express as occupying the subject property. An additional historic assessor card that is not dated depicts a Marathon sign on the southern boundary of the subject property with two dispensers located south of the building, one dispenser located near the southwest corner of the building, and two apparent UST vent pipes located on the west side of the building. MDEQ correspondence indicates that all three USTs were removed from the subject property by approximately 1989. However, no documentation of the completion of assessment activities to evaluate potential environmental impact is available through the MDEQ. The lack of documentation regarding the assessment of the former tanks was identified as an environmental concern. Refer to the Phase II ESA section below for details on sampling activities conducted to investigate the former presence of USTs on the subject property.

The 1991 Johnson city directory identifies Valentine Heating & Cooling as occupying the subject property. Assessor information identifies Roger F. Valentine as the owner of the subject property at this time. Additionally, assessor information indicates that the 2,560-square-foot pole building located along the northern boundary of the subject property was constructed in 1990. The pole

structure is evident in the 1991 and 1994 aerial photographs. Mr. Malcolm Scott acquired the subject property from Roger Valentine in October of 1997 according to assessor records. The subject property continued to be utilized in support of commercial HVAC service as Bangor Heating & Cooling under the ownership of Mr. Scott. The pole building was rebuilt in 2001 subsequent to a fire that destroyed a portion of the structure. A change in the color of the roof of the pole building is evident between the 1999 and 2005 aerial photographs.

A sign currently present on the south side of the building indicates “Once Again....Quality Children’s Clothing and more,” indicating that the subject property was utilized at some point in support of clothing retail. Based upon limited city directory coverage for Bangor and the available assessor documentation, the period of time during which the subject property was used for clothing retail could not be determined.

Available data sources indicate that the subject property was initially developed for commercial purposes in approximately 1950 and continued to be used for commercial operations including various retail activities. Although historic operations have included gasoline and kerosene retail, no indications that automotive service activities were ever conducted on the subject property have been identified. As indicated, the former presence of three USTs containing gasoline and kerosene was identified as an environmental concern. Refer to the Phase II ESA section below for details on activities conducted to investigate the potential for impact in association with historic site operations.

Site Observations

Erik Peterson, Project Manager with Envirologic, conducted a site inspection of the property on December 12, 2011. All areas of the property were accessible. Weather conditions consisted of clear skies with temperatures in the mid-30s °F.

Exterior

The two buildings located on the subject property occupy approximately half of the site. The retail building is located near the southwest corner of the parcel and the pole building is situated along the northern property boundary. Asphalt cover is in place south of the retail building, along W. Monroe St. The asphalt cover was observed to be in fair condition with pitting and cracking but no staining evident. Sand/gravel ground cover is present west of the buildings along the western property boundary. The remainder of the subject property consists of landscaped lawn space. A

sign with electric service for Bangor Heating & Cooling is located in the southeast corner of the subject property.

An approximately two-by-four-foot steel plate was observed on the ground near the northwest corner of the retail building. Based upon observations made during the Phase II ESA activities, detailed below, the plate was determined to not represent a potential subsurface feature or environmental concern.

No indications of pits, ponds, lagoons, or areas of fill material were observed on the date of the site inspection. No indication of exterior chemical storage, underground storage tanks, stained ground surface, distressed vegetation, controlled substances, or improper waste disposal were observed on the date of the site inspection.

Interior

The southern portion of the retail building was observed to consist primarily of open floor space. This portion of the building contains carpet over the concrete slab. Miscellaneous items including chairs, desks, and retail display racks are staged in this portion of the building. The northern portion of the retail building consists of an office, storage area, and restroom. Shelving units containing small HVAC parts and general cleansers are present in the storage area. The concrete floor in the northern portion of the retail building was observed to be in fair condition with some staining but no significant pitting or cracking evident.

The pole building was observed to consist of a small office/storage area in the southwest corner of the structure with the remainder of the building consisting of open floor space. No floor drains were observed within the concrete floor of the pole building. The office/storage area contains shelving units with small HVAC parts and tools along with minor quantities of paints and cleaning supplies. Three Bangor Heating and Cooling vans occupy the open portions of the pole building. The north wall of the pole building is occupied with shelving units containing materials associated with HVAC operations, including: metal ductwork of various shapes and sizes, tools, and minor chemical storage. Chemical storage was observed to consist of paints, cleansers, a gasoline can, and concrete patch. The chemical containers were observed to be in good condition with no indications of leaks or spills evident. Additional shelving units and work benches are located in the southeast and northeast corners of the building.

Although not identified as an environmental concern, Envirologic recommends that all chemical containers be removed from the subject property and properly disposed.

No Recognized Environmental Conditions were identified as a result of the site inspection.

Chemical Storage and Waste Disposal

No indications of current bulk chemical storage in association with the unoccupied property were identified at the time of the Phase I ESA site inspection. The subject property was historically utilized for various retail operations that would not have involved significant chemical storage or waste disposal. As detailed below, underground storage tanks containing gasoline and diesel fuel were historically located on site. However, no indications of historic operations that would have involved the generation of potential chemical waste, such as automotive service, have been identified.

Utilities

The subject property is currently serviced by the following utilities: natural gas provided by Consumers Energy, electricity provided by American Electric Power (AEP), municipal water, sanitary sewer, and storm sewer provided by the City of Bangor. Consumers Energy documentation indicates that natural gas was first connected to the subject property in 1953, which coincides with the initial development of the subject property.

No indications of the historic presence of septic systems or private water supply wells on the subject property were provided by the Van Buren County Environmental Health Department. However, Mr. Lowder of the City of Bangor reports that the development of the subject property pre-dates the availability of municipal sanitary sewer service for the City of Bangor. Mr. Lowder reports that it is not known if the site historically used a septic holding tank that would have been emptied as needed or if the site historically used a leach field. Based upon the retail nature of historic operations, the presumed former use of a septic system has not been identified as an environmental concern. No indications of the continued presence of a septic system or a leach field were identified through the completion of the ground-penetrating radar (GPR) survey.

Any potential remnant utility features that may be encountered in the future should be removed from the subject property and properly disposed.

Underground Storage Tanks and Above Ground Storage Tanks

The subject property is identified as an Underground Storage Tank (UST) site with the MDEQ based upon the former presence of two gasoline USTs and one kerosene UST. A summary of MDEQ information is provided below.

Facility Information:

Facility ID:00018850
Bangor Express
720 W Monroe St, Bangor, MI 49013
Phone# : (616) 427-8464

Owner Information:

Bangor Heating & Cooling
2813 W Main St Ste 8, Kalamazoo, MI 49006

Tank ID	Tank Status	Capacity (in gallons)	Installation Date	Substance Stored	Tank Release Detection	Piping Release Detection	Piping Material	Piping Type	Construction Material	Impressed Device
1	Removed from Ground	3000	4/22/1979 12:00:00 AM	Gasoline			Galvanized Steel		Cathodically Protected Steel	No
2	Removed from Ground	1000	4/22/1979 12:00:00 AM	Gasoline			Galvanized Steel		Cathodically Protected Steel	No
3	Removed from Ground	300	4/22/1979 12:00:00 AM	Kerosene			Galvanized Steel		Cathodically Protected Steel	No

Historic photographs of the subject property available through the City of Bangor Assessor's Department indicate the former presence of two dispensers south of the retail building and a third dispenser near the southwest corner of the retail building. The historic photographs indicate the presence of UST system vent pipes on the west side of the retail building. No indications of the continued presence of USTs on the subject property were identified as a result of the completion of a GPR geophysical survey of the subject property completed in December of 2012.

As detailed in the Phase II ESA section below, the subject property is identified as a "facility" as defined by Part 201 of NREPA based upon the presence of petroleum impact that has been attributed to the former presence of USTs.

No indications of the current or historic presence of above ground storage tanks have been identified in association with the subject property.

Polychlorinated Biphenyls (PCBs)

Envirologic evaluated the potential for PCBs-containing materials associated only with electrical and hydraulic equipment. One pole-mounted transformer is present near the southeast corner of the subject property, within the W. Monroe St. right-of-way. No labels indicating the potential PCBs-containing status of the transformer was evident. No indications of a potential fluid release such as staining or distressed vegetation was noted at the base of the transformer pole. Any remedial liability associated with a potential release from the transformers would be the responsibility of the utility provider.

ASSESSMENT OF IDENTIFIED SITES OF CONCERN

Environmental Radius Report

Environmental Data Resources, Inc. (EDR) generated an “EDR Radius Map Report” that is provided in Appendix C. The purpose of the radius report is to identify potential and confirmed sources of contamination at or near the subject property. EDR searched and reviewed appropriate state and federal environmental databases within required radii from the subject property, in accordance with ASTM Standard E1527-05 requirements. The following state and federal environmental databases were reviewed:

- *Federal NPL—National Priority List*, high-ranking contaminated sites targeted for federal cleanup action
- *Federal CERCLIS—Comprehensive Environmental Response, Compensation, and Liability Information System*, potential uncontrolled hazardous waste sites
- *Federal NFRAP*—sites with a completed assessment under CERCLA, and for which EPA has determined that no further steps will be taken
- *Federal RCRA TSD—Resource Conservation and Recovery Act*, permitted hazardous waste treatment, storage, and disposal facilities
- *Federal RCRA COR*—hazardous waste sites undergoing corrective action under RCRA
- *Federal RCRA GEN*—generators of hazardous waste
- *Federal ERNS—CERCLA Emergency Response Notification System*, sites where EPA has conducted emergency response actions for hazardous substance releases
- *State Sites—State Priorities List, Part 201 Sites*, sites subject to reporting and remediation under Michigan’s Part 201 of Act 451
- *State SWL—Solid Waste Facilities*, active and inactive solid waste facilities
- *State LUST—Leaking Underground Storage Tank*, sites with confirmed releases from underground storage tank systems
- *State UST/AST—Underground/Above Ground Storage Tank*, sites with registered underground or above storage tanks
- And other reasonably ascertainable publicly available databases. Refer to Appendix C for a full list of all databases.

The majority of the sites were identified through the report as former (closed) sites of contamination or as sites that are listed simply due to the presence of regulated substances or wastes (e.g., UST site, RCRA Generator sites, etc.).

Envirologic requested and reviewed file information for the following selected sites based upon the nature of their database listing and/or proximity to the subject property:

Bangor Express (Subject Property) 720 W. Monroe St. Bangor, MI	UST
Gary Gruetzmacher/Jerry's Garage (< 1/8 Mile East) 600 W. Monroe St. Bangor, MI	UST, LUST RCRA-CESQG
DL Miller Funeral Home, Inc. (1/4 – 1/2 Mile ESE) 258 W. Monroe St. Bangor, MI	UST, LUST BEA
Ghorta Brothers LLC (1/4 – 1/2 Mile ESE) 204 W. Monroe St. Bangor, MI	UST, LUST

Environmental History of Identified Sites

Bangor Express

The subject property appears in the UST database due to the former presence of three tanks: 3,000-gallon gasoline, 1,000-gallon gasoline, and 300-gallon kerosene (MDEQ Facility ID # 00018850). The tanks were reportedly installed in 1979, and based upon available documentation the tanks were removed in approximately 1989. No indications of the continued presence of USTs on the subject property were identified as a result of the GPR geophysical survey completed in December of 2012. The presence of petroleum impact on the subject property has been attributed to the former presence of USTs on the site. As indicated, the “facility” status of the subject property has been identified as a Recognized Environmental Condition.

Gary Gruetzmacher/Jerry's Garage

Gary Gruetzmacher is identified as an “open” Leaking Underground Storage Tank (LUST) site with the MDEQ based upon a release reported in July of 1991 during the removal of tanks from the site. The Gary Gruetzmacher property is identified as a “closed” UST site due to the former presence of a 5,000-gallon gasoline tank, a 3,000-gallon gasoline tank, and a 2,000-gallon tank with unknown contents. Release response activities have been conducted by EE & Lab Services, including a Phase II Hydrogeologic study completed in November of 1994. The available documentation indicates that approximately 577 cubic yards of impacted soil has been excavated

and removed from the site. Groundwater flow direction on the site has been reported to the west-southwest. The extent of groundwater impact has not been defined in association with the release. However, the available hydrogeologic data has not identified groundwater impact beneath Alexander St., which is located east of the subject property.

Based upon the reported groundwater flow direction in the region, the potential for impact from offsite sources was identified as an environmental concern. However, no indications of impact from an offsite source were identified as a result of Phase II ESA activities.

The 600 Monroe St. site also appears in the RCRA-Conditionally Exempt Small Quantity Generator database. The RCRA-CESQG status is associated with automotive service activities conducted onsite. No violations in association with the RCRA-CESQG status are presented in the EDR report.

Based upon the available documentation and Phase II ESA results detailed below, the potential for the Gary Gruetzmacher/Jerry's Garage site to impact the subject property is believed to be low.

DL Miller Funeral Home, Inc.

The DL Miller Funeral Home appears as a "closed" UST site due to the former presence of one 3,000-gallon gasoline UST and two 1,000-gallon gasoline USTs removed from the property in September of 2010. The DL Funeral Home appears as an "open" LUST site due to a release of gasoline reported at the time of UST removal. The DL Miller Funeral Home site also appears in the Baseline Environmental Assessment (BEA) database in association with a BEA completed by Prism Environmental in November of 2010. The BEA details the presence of petroleum impact to soil within the former UST vault of the DL Miller site. Groundwater was reportedly not encountered during the completion of assessment activities. Based upon the lack of identified groundwater impact along with the distance to the subject property, the potential for the DL Miller site to impact the subject property is believed to be low.

Ghorta Brothers LLC

Ghorta Brothers LLC appears as an "open" UST site due to the former presence of five 4,000-gallon gasoline USTs removed from the property in May of 1999, and the continued presence of four 4,000-gallon gasoline USTs installed in June of 1999. Ghorta Brothers LLC appears as an "open" LUST site due to three separate gasoline releases from April and November of 1994 and June of 1995. Release response activities conducted by Wightman include a Progress Report

completed in July of 2009. The Progress Report indicates that 635 cubic yards of impacted soil and 580 gallons of impacted water have been removed from the site. The groundwater flow direction on the Ghorta site has been reported to vary between northeast and northwest. The reported groundwater flow direction indicates the Ghorta site is located hydraulically side-gradient or downgradient of the subject property. Based upon the reported groundwater flow direction and Phase II ESA results detailed below, the potential for the Ghorta site to impact the subject property is believed to be low.

Orphan Sites

Eight orphan sites are listed in the radius report. These sites are not mapped due to incomplete address information. Envirologic reviewed the orphaned sites, and based on local knowledge, identified their approximate location. Given their distance to the project site and/or the nature of the database listing, the potential for the identified offsite properties to impact the subject property is believed to be low.

Observations of Adjacent Properties

The subject property was observed to be situated within an area of mixed commercial and residential development. Private residences are located north and south of the subject property. Private residences and Bangor Plastics, Inc. are located northwest of the subject property. Private residences and the Car Care Center are located southwest of the subject property. A private residence is located immediately east of the subject property. Commercial development east of Alexander St. includes Phil's Auto Repair and Jerry's Garage. Commercial development southeast of the subject property includes Do It Best hardware and a vacant building identified as U.S. Die Casting.

No indications of bulk chemical storage or conspicuous environmental concerns were noted in association with adjacent offsite properties. Similarly, aerial photographs, city directories, and historical plat maps did not indicate any other current or historic Recognized Environmental Conditions on the adjoining properties.

PHASE II ENVIRONMENTAL SITE ASSESSMENT

Envirologic performed Phase II ESA activities in order to investigate the potential for impact to the subject property in association with historic site operations as well as the presence of offsite properties of known environmental impact. The Phase II ESA consisted of the completion of a GPR geophysical survey and the installation of nine GeoprobeTM soil borings for the collection of soil and groundwater samples. The Phase II ESA was completed in accordance with a Sampling Plan approved by the U.S. EPA prior to the initiation of field activities. Refer to Figure 2, Appendix A for a site plan detailing boring locations.

Soil sampling for volatile organic compounds (VOCs) was completed utilizing EPA Method 5035 protocols. All subsurface sampling equipment was cleaned with a phosphate-free detergent wash, followed by a freshwater rinse and a deionized water rinse prior to and between each boring in order to prevent cross-contamination. All boring locations were backfilled with native soil.

Groundwater samples were collected via a peristaltic pump from either temporary groundwater monitoring wells constructed of one-inch PVC with a five-foot screened interval set to straddle the water table or a temporary screen point-sample with a four-foot screened interval set to straddle the water table. Groundwater samples were collected subsequent to monitoring stabilization of purge water for temperature, pH, and conductivity, as measured by an Oakton portable waterproof pH/CON 300 Meter. Due to the observed turbidity, the groundwater sample for metals analyses was field filtered and dissolved metals concentrations were reported.

Soils encountered by Envirologic were generally characterized as inter-bedded lenses of well-sorted dark brown silty sand, well-sorted brown sand, firm brown clay with medium to low plasticity and soft gray clay with high plasticity. Groundwater was encountered approximately 18 feet below ground level (bgl).

Ground Penetrating Radar (GPR) Geophysical Survey

A GPR geophysical survey was completed across all exterior portions of the subject property on December 28, 2011. The geophysical survey report is presented in Appendix H. No indications of the continued presence of USTs on the subject property were identified as a result of the GPR survey. The GPR survey did indicate the presence of disturbed soils consistent with a potential former UST vault on the west side of the retail building. This result is consistent with historic

photographs indicating the presence of vent pipes and a dispenser on the west side of the retail building.

Although no indications of the continued presence of tanks were identified, the GPR result did indicate the potential continued present of remnant piping extending from the former dispenser area south of the retail building and trending northwest toward the former UST vault area. Additionally, a piece of scrap steel was identified near the southwest corner of the retail building; the location of a former UST dispenser. Envirologic recommends that any potential remnant UST system piping or debris that might be encountered in the future be removed from the subject property and properly disposed.

Geoprobe™ Boring Installation

Envirologic completed Geoprobe™ boring installation activities on December 28, 2011. Nine Geoprobe™ soil borings were installed across the subject property for the characterization of subsurface conditions and the collection of soil/groundwater samples. A summary of the boring installation activities is presented below.

Former Dispenser Locations

Boring GSB-1 and GSB-2 were installed within former dispenser locations south of the retail building as detailed in historic photographs and evident by asphalt patching. Boring GSB-1 was installed to a depth of 20 feet bgl and boring GSB-2 was installed to a depth of 10 feet bgl. No indications of impact (visual, olfactory, photo-ionization detector (PID) responses) were noted during boring installation. Based upon the lack of indications of impact, a soil sample was collected four feet bgl from borings GSB-1 and GSB-2. The sample depth was selected in order to characterize subsurface conditions at a depth consistent with the typical base of dispenser piping. Additionally, a groundwater sample was also collected from location GSB-1. The groundwater sample was collected from the screened interval of 16-21 feet bgl. No indications of impact were noted during collection of the groundwater sample.

Boring GSB-3 was installed at the southwest corner of the retail building in association with a third historic dispenser location. The boring was installed to a depth of 10 feet bgl. A petroleum odor and a PID response of 64.2 ppmv were noted in association with a lens of damp sandy soil encountered five feet bgl. Based upon the field observations, a soil sample was collected five feet

bgl from boring GSB-3. Indications of petroleum impact did not extend to a gray clay encountered approximately 7.5 feet bgl.

Former Underground Storage Tanks

Borings GSB-4, GSB-5, GSB-6, and GSB-7 were installed within sand/gravel ground cover west of the retail building. The boring locations were selected based upon the GPR survey results along with historic photographs of the site. Boring GSB-4 was installed to a depth of 21 feet bgl while borings GSB-5, GSB-6, and GSB-7 were installed to a depth of 10 feet bgl.

Soil staining, an apparent petroleum odor, and a PID response of 49.7 ppmv was noted in a one-foot-thick sand lens encountered approximately 10 feet bgl at boring GSB-4. Based upon the field observations a soil sample was collected 10 feet bgl from boring GSB-4. The sample depth is also consistent with the depth at which the base of a 3,000-gallon tank might be encountered. The staining and petroleum odor did not persist beyond a depth of approximately 12 feet bgl. In addition to the soil sample, a groundwater sample was collected from a temporary screen point sampler with a four-foot screened interval set to straddle the water table at a depth of 17 to 21 feet bgl. No indications of groundwater impact (odor, sheen) were noted during collection of the groundwater sample.

No indications of impact (visual, olfactory, PID responses) were noted during installation of borings GSB-5 and GSB-6. Based upon the lack of indications of impact, a soil sample was collected 10 feet bgl from borings GSB-5 and GSB-6. The sample depth was selected based upon observations at location GSB-4 and also to characterize subsurface conditions at a depth consistent with the typical base of a 3,000-gallon UST.

Boring GSB-7 was installed northwest of location GSB-3 and southeast of location GSB-4, based upon observations of impact noted at these locations along with the lack of indications of impact at locations GSB-5 and GSB-6. Boring GSB-7 was installed to a depth of 10 feet bgl. A slight petroleum odor and a PID response of 108.3 ppmv was noted in association with silty soils encountered eight feet bgl at this location. Indications of apparent petroleum impact did not extend beyond approximately nine feet bgl at location GSB-7. Based upon the field observations a soil sample was collected eight feet bgl at location GSB-7.

Steel Plate

Boring GSB-9 was installed adjacent to an approximately two-by-four-foot steel plate located north of the retail building and south of the pole building. The presence of this steel plate was initially identified as a potential concern during the Phase I ESA based upon the potential that this plate represented the presence of a subsurface feature. Upon removal the plate was determined to be resting on the ground surface with no void/feature beneath the plate. Boring GSB-9 was installed to a depth of five feet bgl within the footprint of area where the plate was located. No indications of impact (visual, olfactory, PID responses) were noted during installation of boring GSB-9. Based upon the field observations no samples for laboratory analysis were collected from location GSB-9.

Offsite Properties

Boring GSB-8 was installed proximal to the eastern boundary of the site in order to characterize groundwater conditions relative to offsite properties of known environmental impact located hydraulically side-gradient or up-gradient to the subject property. The boring was installed to a depth of 22 feet bgl. No indications of impact (visual, olfactory, PID responses) were noted during installation of boring GSB-8. A groundwater sample was collected from the screened interval of 17.5-21.5 feet bgl. No indications of groundwater impact (odor, sheen) were noted during collection of the groundwater sample.

LABORATORY ANALYTICAL RESULTS

The collected soil and groundwater samples were submitted to TriMatrix Laboratories, Inc. of Grand Rapids, Michigan for laboratory analysis. The sample containers were placed into a chilled cooler for transportation to the laboratory using standard chain-of-custody procedures. The samples associated with the former gasoline and diesel UST systems were analyzed for benzene, toluene, ethylbenzene, xylenes (BTEX), trimethylbenzene isomers (TMBs), ethylene dibromide, 1,2-dichloroethane, PNAs, and lead. The sample collected in association with offsite properties of known impact were analyzed for a broad range of volatile organic compounds (VOCs 8260+), PNAs, and lead. Due to the high turbidity noted during groundwater sampling and purging, the groundwater samples for metals analyses were field-filtered and dissolved metals concentrations were reported. The laboratory analytical report and a copy of the chain of custody are presented in Appendix H.

A summary of the soil analytical results along with a comparison to Residential cleanup criteria is presented as Table 1. A summary of the groundwater analytical results along with a comparison to Residential cleanup criteria is presented as Table 2.

Notes: 1. All sample results in µg/L (parts per billion) 2. Result bolded and <u>underlined</u> where detected, bolded , <u>underlined</u> and shaded where exceeding applicable cleanup criteria 3. NA = Not Applicable or Not Analyzed, NLV = Not likely to volatilize, <RL = Not identified above Reporting Limit and/or Method Detection Limit 4. G = GSI Protection criterion depends on pH or water hardness or both of the receiving surface water, X = The GSI Protection criterion is not protective for surface water that is used as a drinking water source 5. Cleanup Criteria from Rule 299.5706a of Part 201, March 25, 2011							

A review of Table 1 indicates that select VOCs were identified above Residential cleanup criteria in soil samples collected in association with the former dispenser location near the southwest corner of the retail building and the former UST vault area west of the retail building. Specifically, 1, 2, 4-trimethylbenzene was identified above the Groundwater Surface Water Interface Protection (GSIP) criterion at locations GSB-3 and GSB-7. Additionally, ethylbenzene was also identified at a concentration in excess of the GSIP at location GSB-7. The polynuclear aromatic hydrocarbons naphthalene and 2-methylnaphthalene were identified above reporting limits but below Residential Cleanup Criteria at location GSB-7. The reported concentrations of lead identified in all soil samples are below state-wide default background levels.

A review of Table 2 indicates that no contaminants of concern were identified above reporting limits in the groundwater samples collected on the subject property.

Based upon the identification of select contaminants in soil on the subject property in excess of Residential Cleanup Criteria, the subject property meets the definition of a “facility” as defined by Part 201 of the Natural Resource and Environmental Protection Act (NREPA).

No concerns for unacceptable human health exposures relative to the “facility” contaminants have been identified based upon the fact that the only Residential cleanup criteria exceeded were GSIP criteria, which are protective of aquatic wildlife and not relevant to a human health exposure.

CONCLUSIONS AND RECOMMENDATIONS

Identification of potential environmental concerns at the project site has been limited to those items that may be administratively determined within the scope of this project. Envirologic has performed the Phase I ESA in accordance with the ASTM Standard Practice E1527-05 for commercial property located at 720 W. Monroe St., Bangor, Michigan. Additional non-CERCLA issues that are not typically part of the ASTM standard scope of services (i.e., lead-based paint, radon, mold, vapor intrusion, wetlands, universal wastes) were not addressed as part of this Phase I ESA investigation.

We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E 1527-05 of 720 W. Monroe St., Bangor, Michigan, the property. Any exceptions to, or deletions from, this practice are described in the *Limitations* section of this report. This assessment has revealed no evidence of Recognized Environmental Conditions in connection with the property; except:

- The subject property meets the definition of a “facility” as defined by Part 201 of NREPA.

Petroleum impact to soil in excess of Residential cleanup criteria has been identified on the subject property in association with the former presence of a gasoline and kerosene underground storage tank system.

Envirologic will prepare a Baseline Environmental Assessment and Section 7a Compliance Analysis on behalf of Donald Cleveland, LLC in order to obtain an exemption to remedial liability and demonstrate compliance with “due care” obligations.

Offsite Concerns

The potential for offsite activities to adversely impact the subject property has been evaluated. Multiple sites of known environmental impact are located in the vicinity of the subject property within the City of Bangor. No indications of impact from an offsite source were identified through the completion of Phase II ESA activities on the subject property. Based upon the completed assessment activities, the potential for impact from an offsite source is believed to be low.

FEDERAL BROWNFIELD AMENDMENTS TO CERCLA

The Small Business Liability Relief and Brownfields Revitalization Act of 2002 amended the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) to provide liability limitations for certain landowners. The due diligence effort completed by Envirologic was designed, in part, to meet the requirements that allow landowners to qualify for those protections.

Where no contamination has been evident, the completion of “all appropriate inquiry” was intended to help qualify a landowner as either an “innocent landowner” and/or a “contiguous property owner” with respect to liabilities that may be discovered in the future.

Where contamination has been discovered, the effort was also designed to partly establish a landowner as a “Bona Fide Prospective Purchaser” (one of the requirements is a demonstration that the landowner is not affiliated with any liable party and is beyond the scope of Envirologic’s services). To qualify as a “Bona Fide Prospective Purchaser”, the landowner must also:

1. comply with any land use restrictions,
2. not impede the effectiveness of integrity of any institutional control,
3. take reasonable steps to stop continuing releases, prevent future releases, and prevent or limit human and environmental exposures to hazardous substances,
4. provide cooperation, access, and assistance to persons authorized to conduct response actions,
5. comply with information requests, and
6. provide any legally required notices.

LIMITATIONS

A Phase I ESA represents an attempt to perform an appropriate, particular, and reasonable inquiry consistent with good commercial and customary practice. The Phase I ESA is by necessity a limited investigation. It is not possible to address all past or present land uses and/or site practices that may have affected the quality of the local environment. However, in the professional opinion of Envirologic Technologies, Inc., an appropriate level of inquiry has been made into the previous ownership and uses of the property consistent with good commercial and customary practice in an effort to minimize liability. Interpretations of information provided in this report should be made with respect to the limitations and availability of the data. The results and conclusions of this study do not insure, warrant, or represent that there are no additional environmental issues that might be discovered if additional subsurface investigations were to be undertaken.

Additional non-CERCLA issues that are not typically part of the ASTM standard scope of services (i.e., asbestos, lead-based paint, radon, mold, vapor intrusion, wetlands, universal wastes) were not addressed as part of this Phase I ESA investigation.

QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONALS

The following individuals have conducted this Phase I ESA in accordance with the All Appropriate Inquiry Rule 40 CFR Part 312 and are Environmental Professionals.

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of this part. We have the specific qualifications based on education, training, and experience to assess a property of the nature, history and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR 312.

Erik D. Peterson

Project Manager - Hydrogeologist

Erik D. Peterson holds a Bachelor of Science degree in Hydrogeology from Western Michigan University. Mr. Peterson has been HAZWOPER supervisor certified since May of 1998. Mr. Peterson is an accredited Asbestos Building Inspector through the Michigan Department of Consumer and Industry Services. Mr. Peterson has over 11 years of experience with Envirologic in the areas of Phase I and Phase II ESAs, Baseline Environmental Assessments (BEAs), and project management.

David A. Stegink

Associate Vice President – Senior Environmental Scientist

David A. Stegink graduated from Hope College with a Bachelor of Science degree in Chemistry/Biology and has over 27 years of environmental related experience. Mr. Stegink has served as Environmental Compliance Manager for Envirologic since 1991. Between 1984 and 1991, He served as a Chemist and Operations Manager for a commercial hazardous waste treatment facility. His expertise includes transactional environmental liability, property assessments including Phase I and II ESAs, baseline environmental assessments (BEAs), hazardous waste management, underground storage tanks, storm water management, and environmental policy and regulations.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS list

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System

EXECUTIVE SUMMARY

contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the CERCLIS list, as provided by EDR, and dated 02/25/2011 has revealed that there is 1 CERCLIS site within approximately 0.5 miles of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
LANGLOTZ BARNEY FARM	CENTER ST	ENE 1/4 - 1/2 (0.479 mi.)	24	38

Federal CERCLIS NFRAP site List

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 02/25/2011 has revealed that there is 1 CERC-NFRAP site within approximately 0.5 miles of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
BANGOR INDUSTRIES INC	101 RICHARD BEER MEMORI	E 1/4 - 1/2 (0.459 mi.)	E17	25

Federal RCRA generators list

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 06/15/2011 has revealed that there are 2 RCRA-CESQG sites within approximately 0.25 miles of the target property.

BANGOR PLASTICS INC	809 WASHINGTON ST	NW 0 - 1/8 (0.092 mi.)	4	10

EXECUTIVE SUMMARY

State- and tribal - equivalent CERCLIS

SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Quality's Contaminated Sites List on Diskette With Address.

A review of the SHWS list, as provided by EDR, and dated 10/31/2011 has revealed that there are 3 SHWS sites within approximately 1 mile of the target property.

State and tribal leaking storage tank lists

LUST: The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the Department of Environmental Quality's Leaking Underground Storage Tank (LUST) Database.

A review of the LUST list, as provided by EDR, and dated 10/01/2011 has revealed that there are 9 LUST sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Quality's Michigan UST database.

A review of the UST list, as provided by EDR, and dated 10/01/2011 has revealed that there is 1 UST site within approximately 0.25 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

ADDITIONAL ENVIRONMENTAL RECORDS

Other Ascertainable Records

RCRA-NonGen: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA-NonGen list, as provided by EDR, and dated 06/15/2011 has revealed that there is 1 RCRA-NonGen site within approximately 0.25 miles of the target property.

Hazardous Waste Summary:

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

The NEI (National Emissions Inventory) database contains information

BANGOR INDUSTRIES INC (Continued)

1000436033

on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 06/30/2011	Source: EPA
Date Data Arrived at EDR: 07/12/2011	Telephone: N/A
Date Made Active in Reports: 09/29/2011	Last EDR Contact: 10/12/2011
Number of Days to Update: 79	Next Scheduled EDR Contact: 01/23/2012
	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991	Source: EPA
Date Data Arrived at EDR: 02/02/1994	Telephone: 202-564-4267

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 06/30/2011	Source: EPA
Date Data Arrived at EDR: 07/12/2011	Telephone: N/A
Date Made Active in Reports: 09/29/2011	Last EDR Contact: 10/12/2011
Number of Days to Update: 79	Next Scheduled EDR Contact: 01/23/2012
	Data Release Frequency: Quarterly

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 02/25/2011	Source: EPA
Date Data Arrived at EDR: 03/01/2011	Telephone: 703-412-9810
Date Made Active in Reports: 05/02/2011	Last EDR Contact: 11/29/2011
Number of Days to Update: 62	Next Scheduled EDR Contact: 03/12/2012

	Data Release Frequency: Varies

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Date of Government Version: 02/25/2011	Source: EPA
Date Data Arrived at EDR: 03/01/2011	Telephone: 703-412-9810

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal institutional controls / engineering controls registries

US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 03/16/2011	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/25/2011	Telephone: 703-603-0695
Date Made Active in Reports: 06/14/2011	Last EDR Contact: 09/12/2011
Number of Days to Update: 81	Next Scheduled EDR Contact: 12/26/2011
	Data Release Frequency: Varies

US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 03/16/2011	Source: Environmental Protection Agency

State- and tribal - equivalent CERCLIS

SHWS: Contaminated Sites

State Hazardous Waste Sites. State hazardous waste site records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. Available information varies by state.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

Other Ascertainable Records

RCRA-NonGen: RCRA - Non Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

EDR PROPRIETARY RECORDS

EDR Proprietary Records

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data

Source: Rextag Strategies Corp.

Telephone: (281) 769-2247

U.S. Electric Transmission and Power Plants Systems Digital GIS Data

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Day Care Centers, Group & Family Homes

Source: Bureau of Regulatory Services

Telephone: 517-373-8300

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetlands Inventory

Source: Department of Natural Resources

Telephone: 517-241-2254

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

West Map:	42086-C2 MCDONALD, MI
Most Recent Revision:	1981

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County
VAN BUREN, MI

FEMA Flood
Electronic Data
YES - refer to the Overview Map and Detail Map

Flood Plain Panel at Target Property: 26159C - FEMA DFIRM Flood data

Additional Panels in search area: Not Reported

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property
BANGOR

NWI Electronic
Data Coverage
YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data:*

Search Radius: 1.25 miles
Status: Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era: Paleozoic
System: Mississippian
Series: Osagean and Kinderhookian Series
Code: M1 *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: CAPAC
Soil Surface Texture: loam
Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.
Soil Drainage Class: Somewhat poorly. Soils commonly have a layer with low hydraulic conductivity, wet state high in profile, etc. Depth to water table is 1 to 3 feet.

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: HIGH

Depth to Bedrock Min: > 60 inches

Depth to Bedrock Max: > 60 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	8 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 2.00 Min: 0.60	Max: 7.30 Min: 5.60
2	8 inches	35 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 0.60 Min: 0.20	Max: 7.30 Min: 5.60
3	35 inches	60 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 0.60 Min: 0.20	Max: 8.40 Min: 7.40

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: loamy sand
sandy loam
loamy fine sand
silty clay loam
silt loam
fine sandy loam
muck

Surficial Soil Types: loamy sand
sandy loam
loamy fine sand
silty clay loam
silt loam
fine sandy loam
muck

Shallow Soil Types: sandy clay loam
loamy fine sand
loamy sand

Deeper Soil Types: clay loam
sandy loam
clay
sand
coarse sand
stratified
muck

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

DAN WYANT
DIRECTOR

December 6, 2011

Mr. Erik Peterson
Envirologic Technologies Inc.
2960 Interstate Parkway
Kalamazoo, MI

Dear Mr. Peterson:

SUBJECT: Request for Disclosure of Official Files from Remediation Division

This written notice is issued in response to your **December 2, 2011**, request for information under the Freedom of Information Act (FOIA), MCL 15.231 *et seq.*, which was received by this office on **December 2, 2011**.

The purpose of the FOIA is to provide the public with access to existing, nonexempt public records of public bodies. Your request to examine or receive a copy of the following documents is denied.

Description of documents being denied: **720 W. Monroe St., Bangor**

Reason for denial: To the best of this public body's knowledge, information, and belief, the public record does not exist under the name given by the requester, or by another name reasonably known to the public body.

Authority for denial: Public Act No. 442 of 1976, as amended, Section 3(1). Under section 10 of the FOIA, you may do either of the following:

- 1) Appeal this decision in writing to the Director of the Michigan Department of Environmental Quality at P.O. Box 30473, Lansing, Michigan 48909-7973. The writing must specifically state the word "appeal," and must identify the reason or reasons you believe the denial should be reversed. The head of the department, or his designee, must respond to your appeal within 10 days after its receipt. Under unusual circumstances, the time for response to your appeal may be extended by 10 business days.
- 2) File an action in circuit court within 180 days after the date of the final determination to deny the request. If you prevail in such an action, the court is to award reasonable attorney fees, costs, and disbursements. Further, if the court finds the denial to be arbitrary and capricious, you may receive punitive damages in the amount of \$500.00.

Sincerely,

Melissa Andrews, FOIA Liaison

DEC 9 2011

Dear Mr. Peterson:

SUBJECT: Request for Disclosure of Official Files

This notice is issued in response to your request for information under the Freedom of Information Act, 1976 PA 442, as amended (FOIA), received on December 5, 2011. You have requested information that you describe as "720 W. Monroe St., Bangor" (FOIA 609-12).

Your request will be forwarded to the Remediation Division, and Resource Management Division. You will be receiving a letter from the division(s) indicating whether records fitting your description are present. Due to time constraints, it is necessary to issue a 10-business day extension until December 28, 2011, as permitted under Section 5(2)(d) of the FOIA.

In the future, to ensure that you receive all documents maintained by the Department of Environmental Quality, submit your FOIA to the following address:

THIS MEMORANDUM OF LAND CONTRACT, entered into on October 20, 1997,

BY AND BETWEEN: ROGER P. VALENTINE, a single man, whose address is Not Responsive

hereinafter referred to as the "Seller"

and: MALCOLM D. SCOTT, whose address is Not Responsive

hereinafter referred to as the "Purchaser"

Witnesseth:

Whereas, Purchaser and Sellers have entered into a Land Contract of even date herewith; and

Whereas, the parties desire to enter into this Memorandum of Land Contract to give record notice of existence of said Land Contract;

Now Therefore, in consideration of the Premises and for other good and valuable consideration, Sellers acknowledge and agree that they have sold to Purchaser on the Land Contract dated October 20, 1997, the following premises situated in the City of Bangor, County of Van Buren, State of Michigan, to-wit:

12-2-16 D4
The West 95 feet of Lots 215 and 216, of A.H. Morrison's Map of the Village of South Bangor (now known as City of Bangor) according to the recorded plat thereof, as recorded in Liber 31 of Deeds on Page 271 in the Office of the Register of Deeds for Van Buren County.

The purpose of this Memorandum of Land Contract is to give record notice to the existence of the aforesaid Land Contract.

In Witness Whereof, the parties hereto have signed and sealed this Memorandum of Land Contract on the 20th day of October, 1997.

Executed by Seller in the presence of.

GENERAL INFORMATION

Notification is required by Federal law for all underground tanks that have been used to store regulated substances since January 1, 1974, that are in the ground as of May 8, 1986, or that are brought into use after May 8, 1986. The information requested is required by Section 9002 of the Resource Conservation and Recovery Act, (RCRA), as amended.

The primary purpose of this notification program is to locate and evaluate underground tanks that store or have stored petroleum or hazardous substances. It is expected that the information you provide will be based on reasonably available records, or, in the absence of such records, your knowledge, belief, or recollection.

Who Must Notify? Section 9002 of RCRA, as amended, requires that, unless exempted, owners of underground tanks that store regulated substances must notify designated State or local agencies of the existence of their tanks. Owner means—

(a) in the case of an underground storage tank in use on November 8, 1984, or brought into use after that date, any person who owns an underground storage tank used for the storage, use, or dispensing of regulated substances, and

(b) in the case of any underground storage tank in use before November 8, 1984, but no longer in use on that date, any person who owned such tank immediately before the discontinuation of its use.

What Tanks Are Included? Underground storage tank is defined as any one or combination of tanks that (1) is used to contain an accumulation of "regulated substances," and (2) whose volume (including connected underground piping) is 10% or more beneath the ground. Some examples are underground tanks storing: 1. gasoline, used oil, or diesel fuel, and 2. industrial solvents, pesticides, herbicides or fumigants.

What Tanks Are Excluded? Tanks removed from the ground are not subject to notification. Other tanks excluded from notification are:

1. farm or residential tanks of 1,100 gallons or less capacity used for storing motor fuel for noncommercial purposes;
2. tanks used for storing heating oil for consumptive use on the premises where stored;
3. septic tanks;

4. pipeline facilities (including gathering lines) regulated under the Natural Gas Pipeline Safety Act of 1968, or the Hazardous Liquid Pipeline Safety Act of 1979, or which is an intrastate pipeline facility regulated under State laws;

5. surface impoundments, pits, ponds, or lagoons;

6. storm water or waste water collection systems;

7. flow-through process tanks;

8. liquid traps or associated gathering lines directly related to oil or gas production and gathering operations;

9. storage tanks situated in an underground area (such as a basement, cellar, mineworking, drift, shaft, or tunnel) if the storage tank is situated upon or above the surface of the floor.

What Substances Are Covered? The notification requirements apply to underground storage tanks that contain regulated substances. This includes any substance defined as hazardous in section 101 (14) of the Comprehensive Environmental Response, Compensation and Liability Act of 1980 (CERCLA), with the exception of those substances regulated as hazardous waste under Subtitle C of RCRA. It also includes petroleum, e.g., crude oil or any fraction thereof which is liquid at standard conditions of temperature and pressure (60 degrees Fahrenheit and 14.7 pounds per square inch absolute).

Where To Notify? Completed notification forms should be sent to the address given at the top of this page.

When To Notify? 1. Owners of underground storage tanks in use or that have been taken out of operation after January 1, 1974, but still in the ground, must notify by May 8, 1986. 2. Owners who bring underground storage tanks into use after May 8, 1986, must notify within 30 days of bringing the tanks into use.

Penalties: Any owner who knowingly fails to notify or submits false information shall be subject to a civil penalty not to exceed \$10,000 for each tank for which notification is not given or for which false information is submitted.

INSTRUCTIONS

Please type or print in ink all items except "signature" in Section V. This form must be completed for each location containing underground storage tanks. If more than 5 tanks are owned at this location, photocopy the reverse side, and staple continuation sheets to this form.

GENERAL INFORMATION

Notification is required by Federal law for all underground tanks that have been used to store regulated substances since January 1, 1974, that are in the ground as of May 8, 1986, or that are brought into use after May 8, 1986. The information requested is required by Section 9002 of the Resource Conservation and Recovery Act, (RCRA), as amended.

The primary purpose of this notification program is to locate and evaluate underground tanks that store or have stored petroleum or hazardous substances. It is expected that the information you provide will be based on reasonably available records, or, in the absence of such records, your knowledge, belief, or recollection.

Who Must Notify? Section 9002 of RCRA, as amended, requires that, unless exempted, owners of underground tanks that store regulated substances must notify designated State or local agencies of the existence of their tanks. Owner means—
(a) in the case of an underground storage tank in use on November 8, 1984, or brought into use after that date, any person who owns an underground storage tank used for the storage, use, or dispensing of regulated substances, and
(b) in the case of any underground storage tank in use before November 8, 1984, but no longer in use on that date, any person who owned such tank immediately before the discontinuation of its use.

What Tanks Are Included? Underground storage tank is defined as any one or combination of tanks that (1) is used to contain an accumulation of "regulated substances," and (2) whose volume (including connected underground piping) is 10% or more beneath the ground. Some examples are underground tanks storing: 1. gasoline, used oil, or diesel fuel, and 2. industrial solvents, pesticides, herbicides or fumigants.

What Tanks Are Excluded? Tanks removed from the ground are not subject to notification. Other tanks excluded from notification are:

1. farm or residential tanks of 1,100 gallons or less capacity used for storing motor fuel for noncommercial purposes;
2. tanks used for storing heating oil for consumptive use on the premises where stored;
3. septic tanks;

4. pipeline facilities (including gathering lines) regulated under the Natural Gas Pipeline Safety Act of 1968, or the Hazardous Liquid Pipeline Safety Act of 1979, or which is an intrastate pipeline facility regulated under State laws;
5. surface impoundments, pits, ponds, or lagoons;
6. storm water or waste water collection systems;
7. flow-through process tanks;
8. liquid traps or associated gathering lines directly related to oil or gas production and gathering operations;
9. storage tanks situated in an underground area (such as a basement, cellar, mineworking, drift, shaft, or tunnel) if the storage tank is situated upon or above the surface of the floor.

What Substances Are Covered? The notification requirements apply to underground storage tanks that contain regulated substances. This includes any substance defined as hazardous in section 101 (14) of the Comprehensive Environmental Response, Compensation and Liability Act of 1980 (CERCLA), with the exception of those substances regulated as hazardous waste under Subtitle C of RCRA. It also includes petroleum, e.g., crude oil or any fraction thereof which is liquid at standard conditions of temperature and pressure (60 degrees Fahrenheit and 14.7 pounds per square inch absolute).

Where To Notify? Completed notification forms should be sent to the address given at the top of this page.

When To Notify? 1. Owners of underground storage tanks in use or that have been taken out of operation after January 1, 1974, but still in the ground, must notify by May 8, 1986. 2. Owners who bring underground storage tanks into use after May 8, 1986, must notify within 30 days of bringing the tanks into use.

Penalties: Any owner who knowingly fails to notify or submits false information shall be subject to a civil penalty not to exceed \$10,000 for each tank for which notification is not given or for which false information is submitted.

APPENDIX G

USER'S RESPONSIBILITIES DOCUMENTATION USER QUESTIONNAIRE

USER'S ENVIRONMENTAL QUESTIONNAIRE AND DISCLOSURE STATEMENT

In order to qualify for one of the Landowner Liability Protections (LLPs) offered by the Small Business Relief and Brownfield's Revitalization Act of 2001 (the "Brownfield's Amendments"), the user must provide the following information (if available) to the environmental professional. Failure to provide this information could result in a determination that "all appropriate inquiry" is not complete.

User's Name: Mr. Donald Cleveland

User's Telephone No.: (269) 501-1706 c/o Ms. Coleen Daggett

User's Fax No.: NA

Subject Property: Former Bangor Heating & Cooling

Property Address: 720 W. Monroe St.

City: Bangor, Michigan

1.0 Environmental Cleanup Liens:

Are you aware of any environmental cleanup liens against the property that are filed, recorded or unrecorded under federal, tribal, state or local law?

☐ Yes (If "Yes," please describe) ☒ No

2.0 Activity and Land Use Limitations:

Are you aware of any activity and land use limitations, such as engineering Controls, land use restrictions or institutional controls that are in place at the site and/or have been filed, recorded or unrecorded in a registry under federal, tribal, state or local law?

☐ Yes (If "Yes," please describe) ☒ No

3.0 Specialized Knowledge or Experience of the User:

(a) As the user of this ESA, do you have any knowledge or experience related to the property or nearby properties that could be material to any environmental conditions of this property?

☐ Yes (If "Yes," please describe) ☒ No

(b) Are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

☐ Yes (If "Yes," please describe) ☒ No

4.0 Relationship of Purchase Price to Fair Market Value:

(a) Does the purchase price being paid for this property reasonably reflect the fair market value of the property?

☒ Yes (If "Yes," please describe) ☐ No

(b) If you conclude that there is a difference, have you considered whether the lower price is because contamination is known or believed to be present at the property?

☐ Yes (If "Yes," please describe) ☐ No

5.0 Commonly Known or Reasonably Ascertainable Information:

Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example, as user,

(a) Do you know the past uses of the property? Please list: "[Click here and type]"

(b) Do you know the specific chemicals that are present or once were present on the property?

☐ Yes (If "Yes," please describe) ☒ No

(c) Do you know of spills or other chemical releases that have taken place on the property?

☐ Yes (If "Yes," please describe) ☒ No

(d) Do you know of any environmental cleanups that have taken place at the property?

☐ Yes (If "Yes," please describe) ☒ No

6.0 Presence or Likely Presence of Contamination:

As the user of this ESA, and based on your knowledge and experience related to the property, are there any obvious indicators that point to the presence or likely presence of contamination at the property?

☐ Yes (If "Yes," please describe) ☒ No

The preparer presents that to the best of his/her knowledge, the above statements and facts are true and correct and that to the best of the preparer's knowledge, no material facts have been omitted or misstated.

User's Signature: Mr. Cleveland per ESP interview with representative Colleen Daggett

APPENDIX H

PHASE II ENVIRONMENTAL SITE ASSESSMENT DOCUMENTATION

GROUND PENETRATING RADAR (GPR) GEOPHYSICAL SURVEY TRIMATRIX LABORATORIES, INC. ANALYTICAL REPORT DATA VALIDATION REPORT

December 30, 2011

Erik Peterson
Envirologic Technologies
2960 Interstate Parkway
Kalamazoo, MI 49048
epeterson@envirologic.com

Report Number: 00001236

Survey Site: 720 W Monroe, Bangor Mi

Executive Summary:

Utilize Ground Penetrating Radar to investigate for the evidence of remaining underground storage tanks in an approximately 125' x 80' area.

GPR Information and Background:

GPR has been used extensively in the past for geological and archeological exploration and mapping; however, it has only been since 2001 that GPR had the capability to image shallow targets. The system used for this project has the ability to image targets to a depth of 12 feet with an accuracy of ± 2 inches. The 400 MHz antenna broadcasts a microwave energy pulse of less than $1/6^{\text{th}}$ watt at a rate of 100 ns. This energy pulse is timed as it propagates through a material noting when a return pulse arrives. The time and strength of the return pulse is captured and analyzed and interpreted graphically. This process is shown in the figure of a 1500 MHz antenna below.

Project Layout:

Scans were completed at 5 feet intervals in the north-south and east-west directions throughout the work area described above. These scans were performed in grid layout as separate files for review if necessary. The raw data files are supplied separately from this report.

Project Results:

Data that was taken on the west side of the building showed possible areas that have been excavated and lines running to the old fuel island were also located, these lines ended at the pavement edge running toward the north-west.

Evidence of debris in the soil was also dug up by hand.

Results of the survey did not indicate the presence of UST's in any of the highlighted areas.

Sincerely,

Aaron Carlson
Radar Survey Technician

Area in yellow had possible signs of excavation and debris.
Areas in red were free scan areas, no UST's were located.

January 16, 2012

Envirologic Technologies, Inc.
Attn: Erik Peterson
2960 Interstate Parkway
Kalamazoo, MI 49048

Project: VCBRA/110448

Dear Erik Peterson,

Enclosed is a copy of the laboratory report for the following work order(s) received by TriMatrix Laboratories:

Work Order	Received	Description
1112454	12/30/2011	VB1211, 110448-C

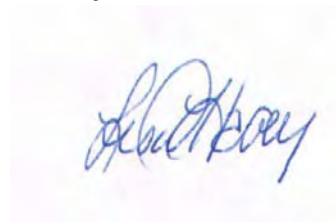

This report relates only to the sample(s) as received. Test results are in compliance with the requirements of the National Environmental Laboratory Accreditation Program (NELAP) and/or one of the following certification programs:

ACLASS DoD-ELAP (#ADE-1542); Arkansas DEP (#10-046-0); Florida DEP (#E87622-05); Georgia EPD (#E87622-05); Illinois DEP (#002656); Kansas DPH (#E-10302); Kentucky DEP (#0021); Louisiana DEP (#03068); Michigan DPH (#0034); Minnesota DPH (#026-999-161); New York ELAP (#44950); North Carolina DNRE (#659); Rhode Island DPH (#E87622); Texas CEQ (#T104704495-11-1); Virginia DCLS (#919); Wisconsin DNR (#999472650).

Any qualification or narration of results, including sample acceptance requirements and test exceptions to the above referenced programs, is presented in the Statement of Data Qualifications section of this report. Estimates of analytical uncertainties and certification documents for the test results contained within this report are available upon request.

If you have any questions or require further information, please do not hesitate to contact me.

Sincerely,

Lisa M. Harvey
Project Chemist

STATEMENT OF DATA QUALIFICATIONS

Semivolatile Organic Compounds by EPA Method 8270C

Qualification: Manual integration was performed on this sample for the analyte(s) listed below in accordance with the TriMatrix Manual Integration SOP. All necessary documentation, including the signed review, is included in the raw data section of the data package.

Analysis: USEPA-8270C

Sample/Analyte:	1112454-03	GSB-3 @ 5	2-Fluorobiphenyl
	1112454-03	GSB-3 @ 5	Benzo(b)fluoranthene
	1112454-03	GSB-3 @ 5	Benzo(k)fluoranthene
	1112454-04	GSB-4 @ 10	Benzo(a)anthracene
	1112454-04	GSB-4 @ 10	Chrysene
	1112454-05	GSB-5 @ 10	Chrysene
	1112454-07	GSB-7 @ 10	Benzo(b)fluoranthene
	1112454-07	GSB-7 @ 10	Benzo(k)fluoranthene
	1112454-08	GSB-7 @ 8	Benzo(b)fluoranthene
	1112454-08	GSB-7 @ 8	Benzo(k)fluoranthene
	1112454-08	GSB-7 @ 8	Phenanthrene-d10
	1114843-BLK1		Naphthalene-d8
	1200046-BLK1		Nitrobenzene-d5
	1200046-BS1		Nitrobenzene-d5
	1200046-MSD1		Phenanthrene-d10

Qualification: The RL for this analysis was elevated due to insufficient sample volume or weight received.

Analysis: USEPA-8270C

Sample: 1112454-09 GSB-1 @ 16-21

STATEMENT OF DATA QUALIFICATIONS**Total Metals by EPA 6000/7000 Series Methods**

Qualification: The analyte concentration in the associated MB was greater than the MDL but less than the RL. The positive sample result, which was greater than 5 times the MB value, is not considered estimated.

Analysis: USEPA-6020A

Sample/Analyte:	1112454-01	GSB-1 @ 4	Lead
	1112454-02	GSB-2 @ 4	Lead

Aqueous Samples: For each sample and container type, check the box if pH is acceptable. If pH is not acceptable for any sample container, record pH in box, and note on Sample Receiving Checklist and on Sample Receiving Non-Conformance Form. If approved by Project Chemist, add acid or base to the sample to achieve the correct pH. Add up to, but do not exceed 2x the volume initially added at container prep (see table below for initial volumes used). Add orange pH tag to sample container and record information requested. Record adjusted pH on this form. Do not adjust pH for container types 3, 6, and 15.

SAMPLE RECEIVING NON-CONFORMANCE REPORT

[illegible]

**DATA VALIDATION REPORT
(QUALITY ASSURANCE ASSESSMENT)**

**COMMERCIAL PROPERTY
720 W. MONROE ST.
BANGOR, MICHIGAN**

Envirologic Technologies, Inc. (Envirologic) completed a Phase II Environmental Site Assessment of the commercial property, 720 W. Monroe St., Bangor, Michigan (subject property) at the request of the Van Buren County Brownfield Redevelopment Authority (VBCBRA) utilizing U.S. EPA Petroleum Assessment grant funds. The purpose of this Data Validation Report is to validate and verify the analytical data, and draw conclusions on the data in relation to the Data Quality Objectives (DQOs).

DQOS AND SAMPLE DESIGN REVIEW

The subject property is a rectangular-shaped parcel occupying 0.3 acres of land. The subject property is developed with a 1,170-square-foot retail building and a 2,560-square-foot pole barn. The subject property was first developed for commercial purposes in approximately 1950 and has been used for multiple retail/commercial operations since that time, including: convenience/grocery store, fuel retail, used clothing retail, and HVAC service. Two gasoline underground storage tanks (USTs) and one kerosene UST historically present on site have been removed from the subject property.

A Phase I ESA of the subject property was completed by Envirologic in January 2012. The fact that the subject property met the definition of a “facility” as defined by Part 201 of NREPA was identified as a Recognized Environmental Condition. Petroleum impact to soil has been identified in association with a former UST system that has been removed from the subject property.

The purpose of the Phase II ESA was to characterize current site conditions within areas of identified impact and also to characterize subsurface conditions on portions of the property not previously assessed.

DATA QUALITY OBJECTIVES

The Phase II ESA is designed to determine the following:

- Has the former presence of UST systems resulted in impact to the subject property? Is the site a “facility” as defined by Michigan’s Part 201 of NREPA? If contaminants exist, do they represent an unacceptable exposure to the intended future use of the site?
- Has the subject property been impacted by the presence of a steel plate representing a potential UST or subsurface feature? Is the site a “facility” as defined by Michigan’s Part 201 of NREPA? If contaminants exist, do they represent an unacceptable exposure to the intended future use of the site?
- Has the subject property been impacted by offsite properties of concern located proximal to the site? Is the site a “facility” as defined by Michigan’s Part 201 of NREPA? If contaminants exist, do they represent an unacceptable exposure to the intended future use of the site?

The DQOs are evaluated below with respect to the environmental concerns and the actual data collected.

DATA REVIEW (DATA VERIFICATION AND VALIDATION)

The data collected in the investigation was reviewed by the Data Manager and Project Manager, Erik Peterson. The purpose of the review was to confirm (verify) that the data was collected in accordance with the Standard Operating Procedures (SOPs) and the Quality Assurance Project Plan (QAPP). The quality of the data was simultaneously assessed to determine that it was scientifically valid. The purpose of the data verification and validation was to determine the usefulness of the data in making decisions posed by the DQOs and for making decisions on future property use with respect to environmental concerns. All of the collected data was determined to be verified and valid using the PARCC criteria (precision, accuracy, representativeness, completeness and comparability) as explained in the following table:

Criteria	Field Data	Laboratory Data
Precision	Field methods and equipment calibration SOPs were followed in order to provide data within the precision limits of the field equipment.	The % recovery for MS/MSD samples were within control limits.
Accuracy	No VOCs were detected in the Trip Blanks.	The Reporting Limit (RL) for select PNAs from samples GSB-3, GSB-4, GSB-5, and GSB-7 were elevated due to insufficient sample volume or weight received.
Representativeness	The laboratory results were representative of field	The samples for analysis were extracted

	observations; that is, apparent petroleum odor was observed during soil sample collection and petroleum VOCs were detected in soil samples.	from the original samples following standard methods, and thus are representative.
Completeness	All proposed boring installation was completed.	All of the analyses provided by the laboratory were determined to be complete.
Comparability	Mask Duplicate soil & groundwater samples were collected. The mask duplicate results were comparable to the sample results.	The samples were analyzed following standard methods and thus are comparable to cleanup criteria and other samples from the project site.

Field Procedures

The Sampling Plan, SOP and QAPP were prepared and reviewed by Mr. Erik Peterson – Project Manager with Envirologic. Field notes and chain of custody procedures (including hold times) and instrument calibration were reviewed for this data assessment.

Quality Assurance/Quality Control Samples

The QA/QC samples collected for this project are presented in following table:

Sample ID	Matrix	Type
Trip Blank	Water	Trip blank prepared by TriMatrix for sample cooler.
EB-Soil	Water	Equipment blank from macro-core sampler
EB-GW	Water	Equipment blank from peristaltic pump
Duplicate-Soil	Soil	Mask Duplicate for GSB-2 @ 4 ft.
Duplicate-Groundwater	Soil	Mask Duplicate for GP-10 @ 2.5 ft.
MS/MSD Soil	Soil	Matrix Spike & Matrix Spike Duplicate for GSB-1 @ 4 ft.
MS/MSD GW	Water	Matrix Spike & Matrix Spike Duplicate for GSB-1 @ 16-21 ft.

Trip Blank

The purpose of the trip blank was to verify that no cross-contamination had occurred during sample handling and shipment. The trip blank was prepared by TriMatrix and maintained throughout the sampling events with the sampling cooler. No contaminants of concern were identified above method detection limits in the Trip Blank. The lack of detection of VOCs in the Trip Blank indicates that the sample handling procedures did not represent a potential for cross-contamination.

Equipment Blanks

The purpose of the Equipment Blanks was to evaluate the potential for the introduction of cross-contamination from one sample to another as a result of decontamination procedures. One

equipment blank for groundwater sampling was collected using the peristaltic pump from deionized water utilized for decontamination procedures. No contaminants of concern were identified above Method Detection Limits in the EB-GW sample.

One equipment blank for soil sampling was collected from the rinsate water after decontaminating the GeoProbe™ macro-core sampler. No contaminants of concern were identified above Method Detection Limits in the EB-Soil sample.

The lack of detection of VOCs in the equipment blank samples demonstrates there was not the potential for cross-contamination at regulated levels as a result of decontamination procedures.

Duplicate Samples

The purpose of the mask duplicate samples was to evaluate the ability of the laboratory to replicate data. One masked duplicate sample for soil was collected from GSB-2 at four feet. No VOCs or PNAs were identified above Reporting Limits in the GSB-2 at four feet and Duplicate – Soil samples. The reported concentrations of lead in the GSB-2 and Duplicate Soil samples were similar (1,900 ug/Kg and 2,100 ug/Kg).

One masked duplicate sample for groundwater was collected from GSB-2 at 16 to 21 feet. No contaminants of concern were identified above Reporting Limits in the GSB-2 at 16 to 21 feet and Duplicate-GW samples.

The analytical results for the duplicate samples indicate that no concerns were identified relative to the ability of the laboratory to replicate data.

Laboratory Data

TriMatrix provided a Quality Assurance Report for the volatile, semi-volatile and metals Laboratory Batches. Envirologic conducted a comparative analysis of the matrix spike and matrix spike duplicate (MS/MSD) results. The purpose of MS/MSD samples is to verify the accuracy and precision of the laboratory operations and evaluate the impact of matrix effects (i.e., bias) on overall analytical performance. The reported percent recovery for analytes in the MS and MSD samples were similar.

Data Reduction and Processing

Limited data reduction and processing was conducted. The field notes were composed by Field Geologist Robert Webster. The analytical laboratory data sheets were reviewed and reduced into a table for the Phase II ESA report by Envirologic Project Manager Erik Peterson. The Phase II ESA report was reviewed by Senior Environmental Scientist David Stegink.

STATISTICAL TEST

Several statistical methods were used for the laboratory data. The first statistical analysis was the comparison of the actual reporting limit to the laboratory standard reporting limit. With the exception of select PNAs from samples BSB-3, GSB-5, GSB-5, and GSB-7, actual Reporting Limits were consistent with laboratory standard reporting limits.

The second statistical analysis was the direct comparison of the detected analytes to the cleanup criteria. Conclusions can be drawn from a direct comparison of contaminant and cleanup concentrations and thus further statistics were not employed to develop background concentrations.

CONCLUSIONS

All of the data collected has been verified and is valid to make decisions for the DQOs. The data presents conditions that would logically be expected based upon the identified site use history and previous analytical results.
